

FWX Aviation - EC135 Audio and Haptic Add-Ons for MSFS 2024

Press Release - June 2026 - FOR IMMEDIATE RELEASE

About FWX Aviation

FWX Aviation (FinnWest Aviation) is an independent developer focused on the Eurocopter EC135 for Microsoft Flight Simulator 2024. The studio builds add-on packs that deepen audio realism and bring physical feedback to sim cockpits, sold direct via finnwestx1.com and on partner marketplaces.

Product Line-Up

FWX EC135 Sound Enhancement Pack (v1.49)

- Replaces the default EC135 cockpit and exterior turbine layer with new samples sourced from real EC135 reference audio.
- Authentic spool-up sequence with a cuttable spool-up phase that lines up with the in-sim startup.
- Drop-in install via dedicated installer, automatic detection of MS Store and Steam paths.
- One-click uninstall restores the original audio cleanly.

FWX Rotor Haptic Engine (v1.53)

- Drives ButtKicker, bass shaker or similar tactile devices in sync with the EC135 main rotor.
- Pause-aware: stops vibrating when the sim is paused, in menus or in a loading screen.
- Touchdown burst, ground vibration damping and a left-skid kick capture key moments of helicopter feel.
- Configurable via a graphical control panel with named profiles.

FWX EC135 Bundle (v1.49)

- Combines the Sound Enhancement Pack and the Rotor Haptic Engine in a single bundle installer.
- Separate uninstall paths for each component.
- Best value entry point for users who want the full audio and haptic stack.

FWX Rotor Shadow Mod (free)

- Free community add-on that adds a rotating shadow on the ground and fuselage underneath the EC135.
- Distributed via flightsim.to and from the FWX Aviation website.
- Optional, fully independent of the paid packs.

What Reviewers Said

"A highly detailed sound set for the EC135 in MSFS 2024."

[ThresholdX](#)

"Hebt die akustische Immersion auf ein neues Niveau."

[simFlight.de](#)

"Covers both ears and body."

[MSFS Addons](#)
